

See Through Roller Shutters

See-through shutters are the perfect solution for enclosing your outdoor living space. While allowing light to filter through, see-through shutters reduce the impact of heat, noise and the elements.

These shutters are a combination of our 40mm domestic profile aluminium slats, paired with clear or tinted polycarbonate slats in an alternating pattern.

Much like our domestic and fire-rated shutters, our see-through shutters can be manually operated or motorised by being hard-wired into the home or with a 12V battery. Motorisation allows for the shutters to be operated singularly or synchronised via our multi-channel remote or the Somfy Connexoon phone app.

Motorisation

We offer systems hard wired into the building or 12V Battery operated motors. All of our motors can be synced to be operated together or separately with one or multiple remotes. Through the Somfy Connexoon App, the shutters can be opened or closed from the users phone. Whatever your automation needs, we have a solution. All of our motors meet the Australian Electrical Standards and come with the EESS Compliance Regulatory Mark.

240V Electric Automation

- 1, 5 or 15 channel remote controls
- Either wall switch or remote motors
- Remotely operated obstacle detection motors
- Push button and/or key switch operation

Battery operated motor

- Somfy wireless RTS
- E-Port Series 12V motor with wall controller
- Shutter Supplies 12v motor with remote control
